

Stage 1.4.2.5.4 — Docling Table / Image / Formula Understanding

This document is intentionally designed as a controlled test document for Docling. It contains ordinary text, a structured table, an embedded architecture image, and a mathematical formula.

1. Structured Table

Stage	Component	Purpose
1	Event Producer	Publishes business events
2	Azure Event Hubs	Ingests and partitions event streams
3	Stream Consumer	Reads and transforms events
4	Azure Data Explorer	Stores data for analytics

2. Architecture Image / Figure

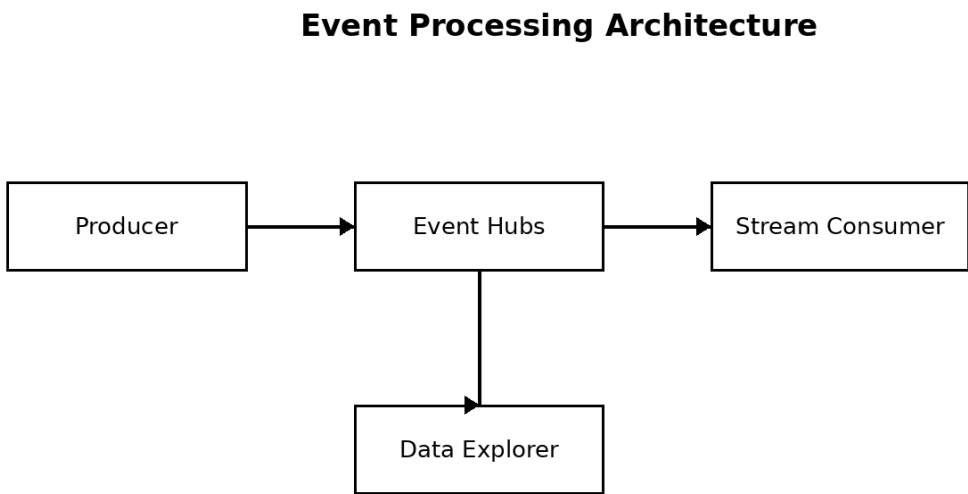

Figure 1 — Event processing architecture

3. Mathematical Formula

The following mathematical expression is included as an image so that we can separately observe how Docling treats formula-like visual content.

$$P(A \mid B) = \frac{P(B \mid A)P(A)}{P(B)}$$

Figure 2 — Conditional probability formula

Experiment: We will inspect Docling's detected tables, pictures, and formula/text elements independently instead of relying only on `export_to_markdown()`.
